READY WITH RAY / FREE FIELD GUIDE

Governments say get ready. Here's your 3-to-10-day setup

1. **Plan 3 to 10 days.** FEMA (Ready.gov) says several days. The UK and EU ask for at least 3. Germany suggests up to 10. Start with 3, build to 10.
2. **Water bank.** 1 gallon per person per day. A family of 4 for 10 days needs 40 gallons. Use food-grade containers only, sealed, cool and dark.
3. **Rotate and treat.** Replace self-filled water every 6 months. Treated city tap water needs nothing added. Otherwise use unscented household bleach at the CDC dose.
4. **Dehydrated food.** Light, stores for years, needs no fridge. Count extra water to rehydrate it. Add food that needs no cooking.
5. **Power bridge.** Run a small gas inverter generator outdoors only, at least 20 feet from doors and windows, to recharge a battery power station.
6. **Indoors on battery.** The power station runs lights, phones, a radio and a fan safely inside. No fumes, no noise.
