# Why taping windows won't save your house

1. **Skip the tape.** Tape does not keep windows from breaking and can create larger shards.
2. **Cover openings.** Impact-rated shutters or 5/8-inch exterior plywood, pre-cut, labeled and with hardware ready before the season.
3. **Garage door.** Often the weakest opening. Install a wind-rated door or a bracing kit made for your door.
4. **Keep it sealed.** A breach lets wind pressurize the house and push up on the roof from inside.
5. **Roof to wall.** Hurricane straps or clips tie the roof structure to the walls. Use a licensed contractor.
6. **Clear the yard.** Bring in furniture, grills, planters, toys and trash cans. They become projectiles.
